DETAILED ACTION

Applicants' amended claims as best understood necessitate a subsequent restriction requirement.

Election/Restrictions

The examiner notes that claim 24, from which all other claims depend directly or indirectly now requires at least a first material and a second material for the hollow microspheres

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1 (claims 25-30) is a semiconductor substrate material wherein hollow microspheres comprise ceramic microspheres.

Species 2 (claims 31-36) is a semiconductor substrate material wherein hollow microspheres comprise glass microspheres.

Species 3 (claims 37-41) is a semiconductor substrate with a hardened and/or sintered multitude or matrix of microspheres.

Species 4 (claims 43-44) is a semiconductor substrate material with microspheres with the first material inner layer with a higher melting point than an second material outer layer.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 24, 42, 45 and 46 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Cited Prior Art

The prior art made of record is considered pertinent to applicant's disclosure. Chellis et al. (Derwent Abstract) teaches a laminate for printed circuit boards with silane coated hollow microspheres (title and abstract). Wright (US Patent No. 4,621,024) teaches a process for preparing metal coated hollow microspheres.
